DQL – ORDER BY

ORDER BY ***sort_expression1*** [ASC | DESC] [NULLS { FIRST | LAST }]
[, ***sort_expression2*** [ASC | DESC] [NULLS { FIRST | LAST }] ...]

ASC – rosnąco (wartości według operatora >) **domyślny**

DESC – malejąco (wartości według operatora <)

NULLS FIRST / LAST – wartości nieokreślone kolejność

The actual order in will depend on the scan and join plan types and the order on disk, but it must not be relied on!

DQL – ORDER BY

```
--
SELECT p.product_name,
       p.product_code,
       p.manufactured_date,
       p.product_quantity * 0.5 AS half_qty
  FROM products p
 ORDER BY product_name ASC, product_code DESC;

--

SELECT p.product_name,
       p.product_code,
       p.manufactured_date,
       p.product_quantity * 0.5 AS half_qty
  FROM products p
 ORDER BY 1 ASC, 2 DESC;
```
