PL/pgSQL – Kursory (Cursor)

Dziel i rządź – podział wielkiego zbioru danych na części i procesowanie go w częściach.

```
DECLARE cur_products cursor for
                        select *
                        from products;

OPEN cur_products;

FETCH cur_products into prd;

CLOSE cur_products;
```

PL/pgSQL – Kursory (Cursor)

DECLARE

Bounded

Unbounded

```
curs1 refcursor;
curs2 CURSOR FOR SELECT * FROM tenk1;
curs3 CURSOR (key integer) FOR SELECT * FROM tenk1 WHERE unique1 = key;
```

OPEN

Bounded

Unbounded

```
OPEN curs1 FOR EXECUTE format('SELECT * FROM %I WHERE col1 = $1',tabname) USING keyvalue;
OPEN curs2;
OPEN curs3(42);
OPEN curs3(key := 42);
```

FETCH

```
FETCH curs1 INTO rowvar;
FETCH curs2 INTO foo, bar, baz;
FETCH LAST FROM curs3 INTO x, y;
FETCH RELATIVE -2 FROM curs4 INTO x;
```
